The ICT4Water Cluster

The ICT4WATER cluster is a hub for innovative activities contributing to strategic views, organizing and participating at major exhibitions and scientific events, and disseminating results through major channels.

Multiple two way benefits

Stakeholders

- Cities & Regions
- Industry
- Research
- Associations
- etc. ...

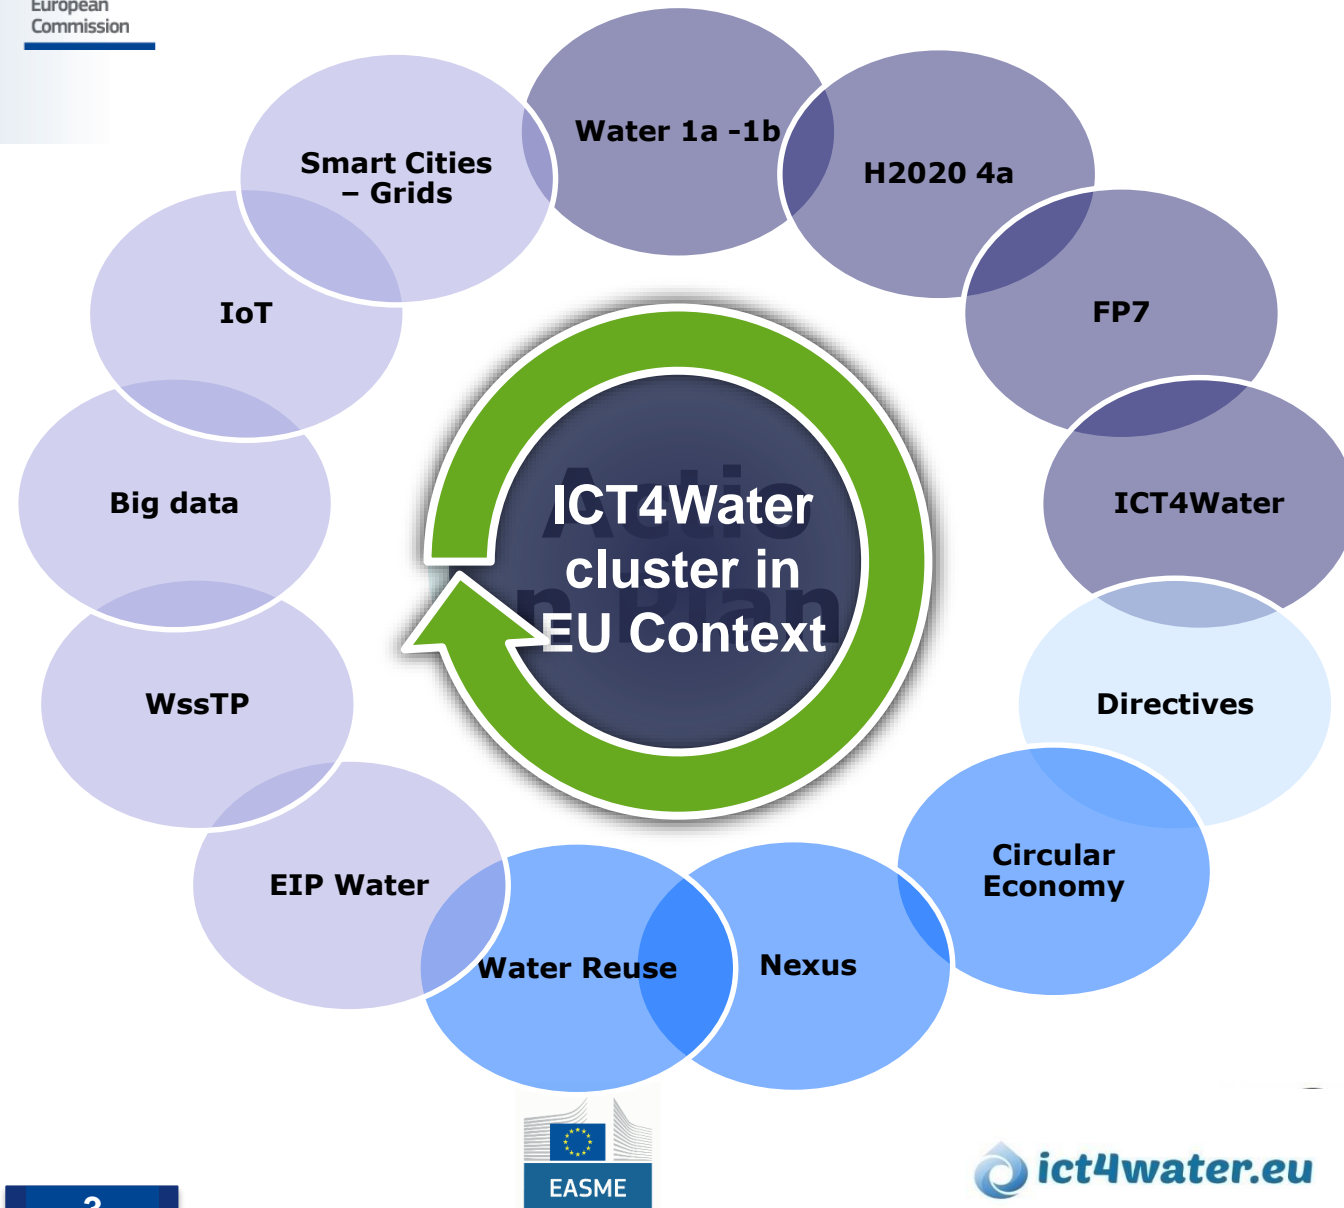

H2020 and FP9

Innovation,
Implementation &
replication with EU
funding

Initiatives

- Video
- Discussion Platform
- Website
- Roadmap
- Action Plan

Integrated efforts
linked to
associations,
circular economy,
nexus, ...

Synergies

EIP Water

Exchange of information- Experience in common issues

Maximize dissemination & Exploitation
Special sessions in Conferences/Publications
contact with relevant stakeholders

Common development of guidelines, strategies, procedures and standards

Joint papers among projects

Links with/participation in Water
(EIP/WssTP/IWA...) and ICT (AIOTI/BDVA...) relevant action groups (Ctrl+SWAN)

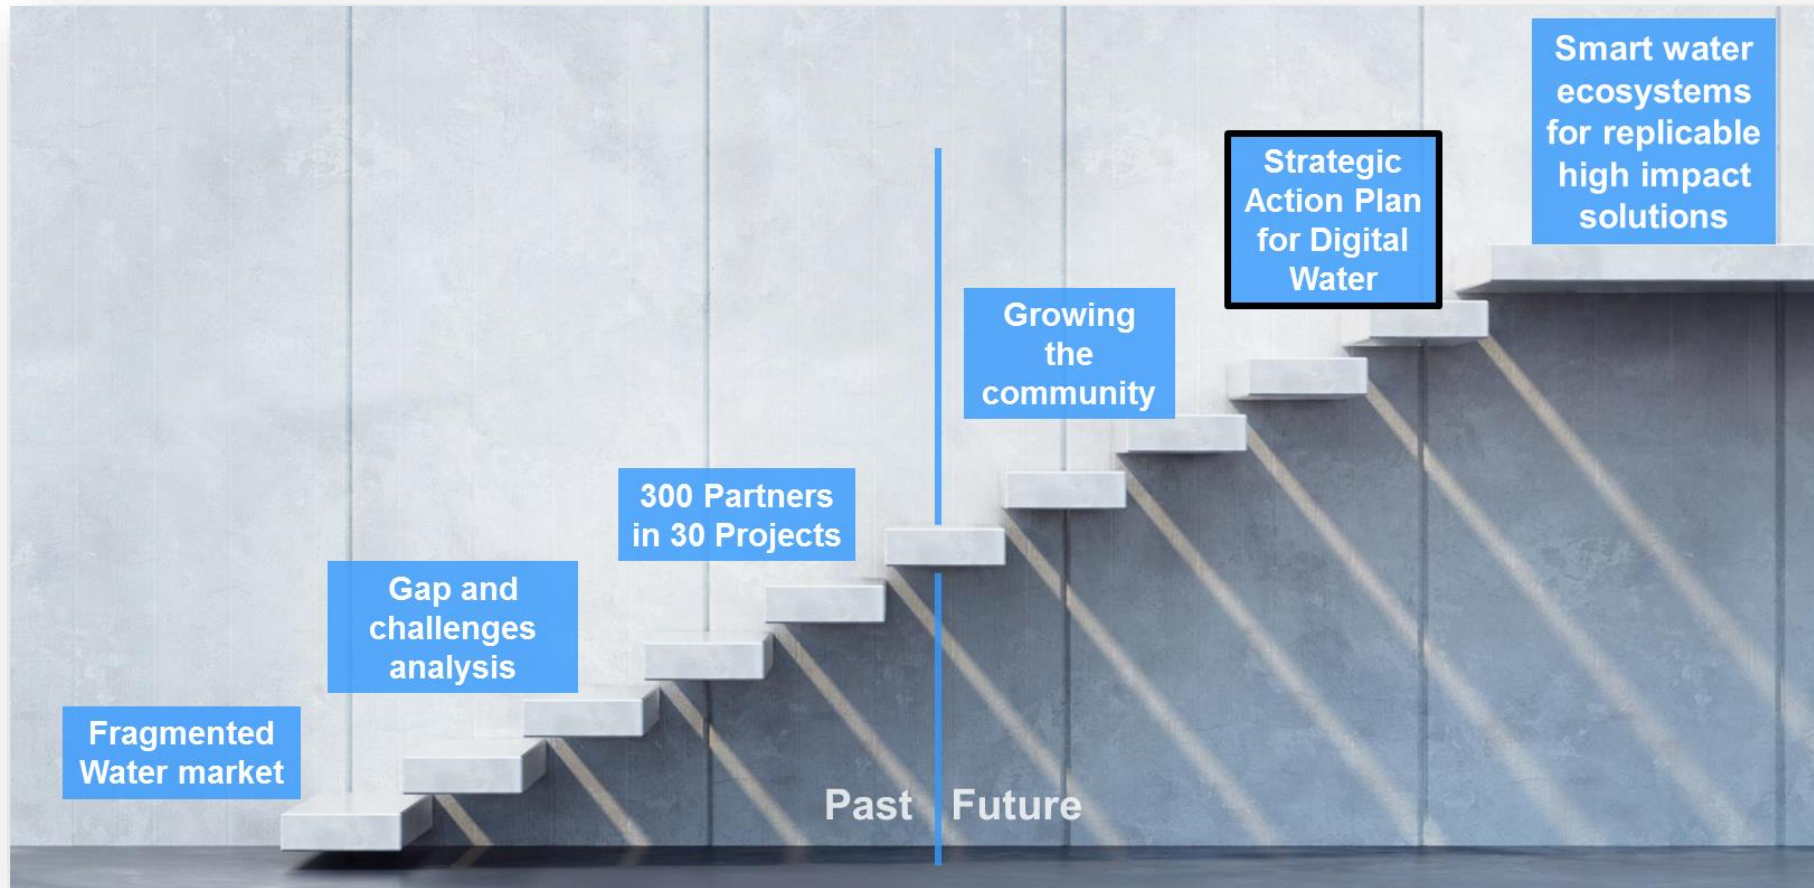

Building New opportunities

EVERYONE CAN LEAD INITIATIVES!!!

Evolution

Sucess stories

Summer School

**Smart Systems
for Water
Management**

Modelling, Simulation, Analytics
and ICT for Behavioural Change

Project Events

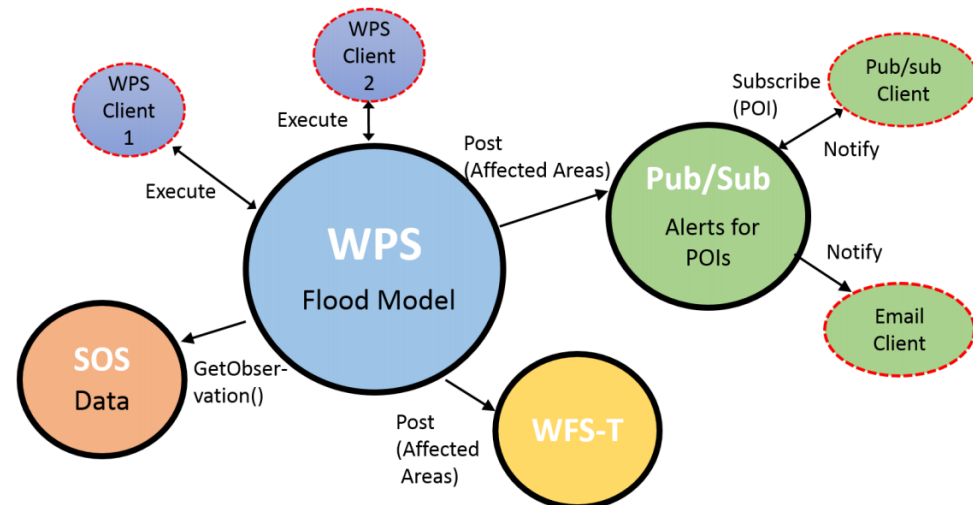

ISS-EWATUS

Interoperability pilot

FREEWAT
Free and Open Source Software Tools for Water Resource Management
EU HORIZON 2020 Project

Outcomes

Roadmap 2015

Focused on Water Management

Technological, social and organizational challenges:

- Cost/Benefit analysis of ICT
- Synergies across sectors
- Data sharing
- interoperability
- Standardization
- Indicators

Roadmap 2016

Focused in Water Management

Main Gaps and Challenges to be addressed:

- Big Data
- Data infrastructures
- Link with Smart Cities
- Nexus, Water-Food-Energy
- Standardization
- Lack of reliable field trials

Digital Water Action Plan 2017

Wider approach, Water Management, Treatment, Reuse, Circular Economy, every field where ICT can contribute

Creation of a **borderless Digital single market for water services** should be reinforced by creation of multi-stakeholders platform that should **Foster standardization and reliable field trials**

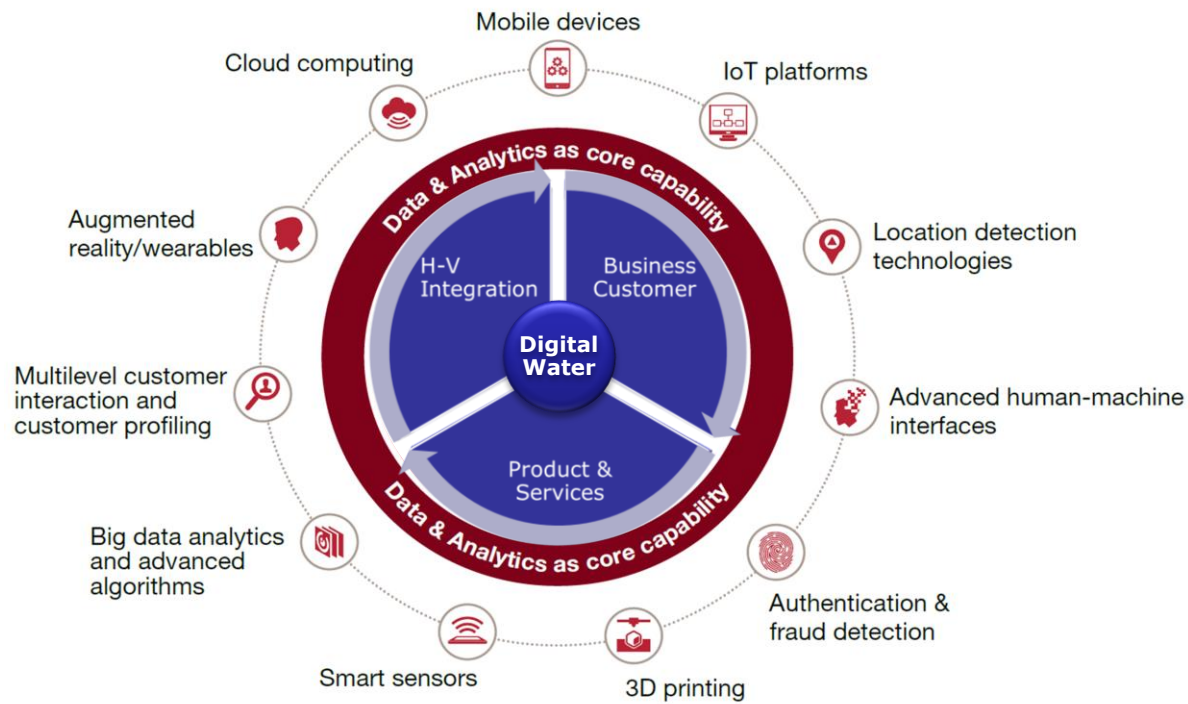

Scope

-  Digitalization
-  Big Data
-  IoT
-  Standardization
-  Interoperability
-  Data Science (AI & ML)
-  Smartness
-  ...

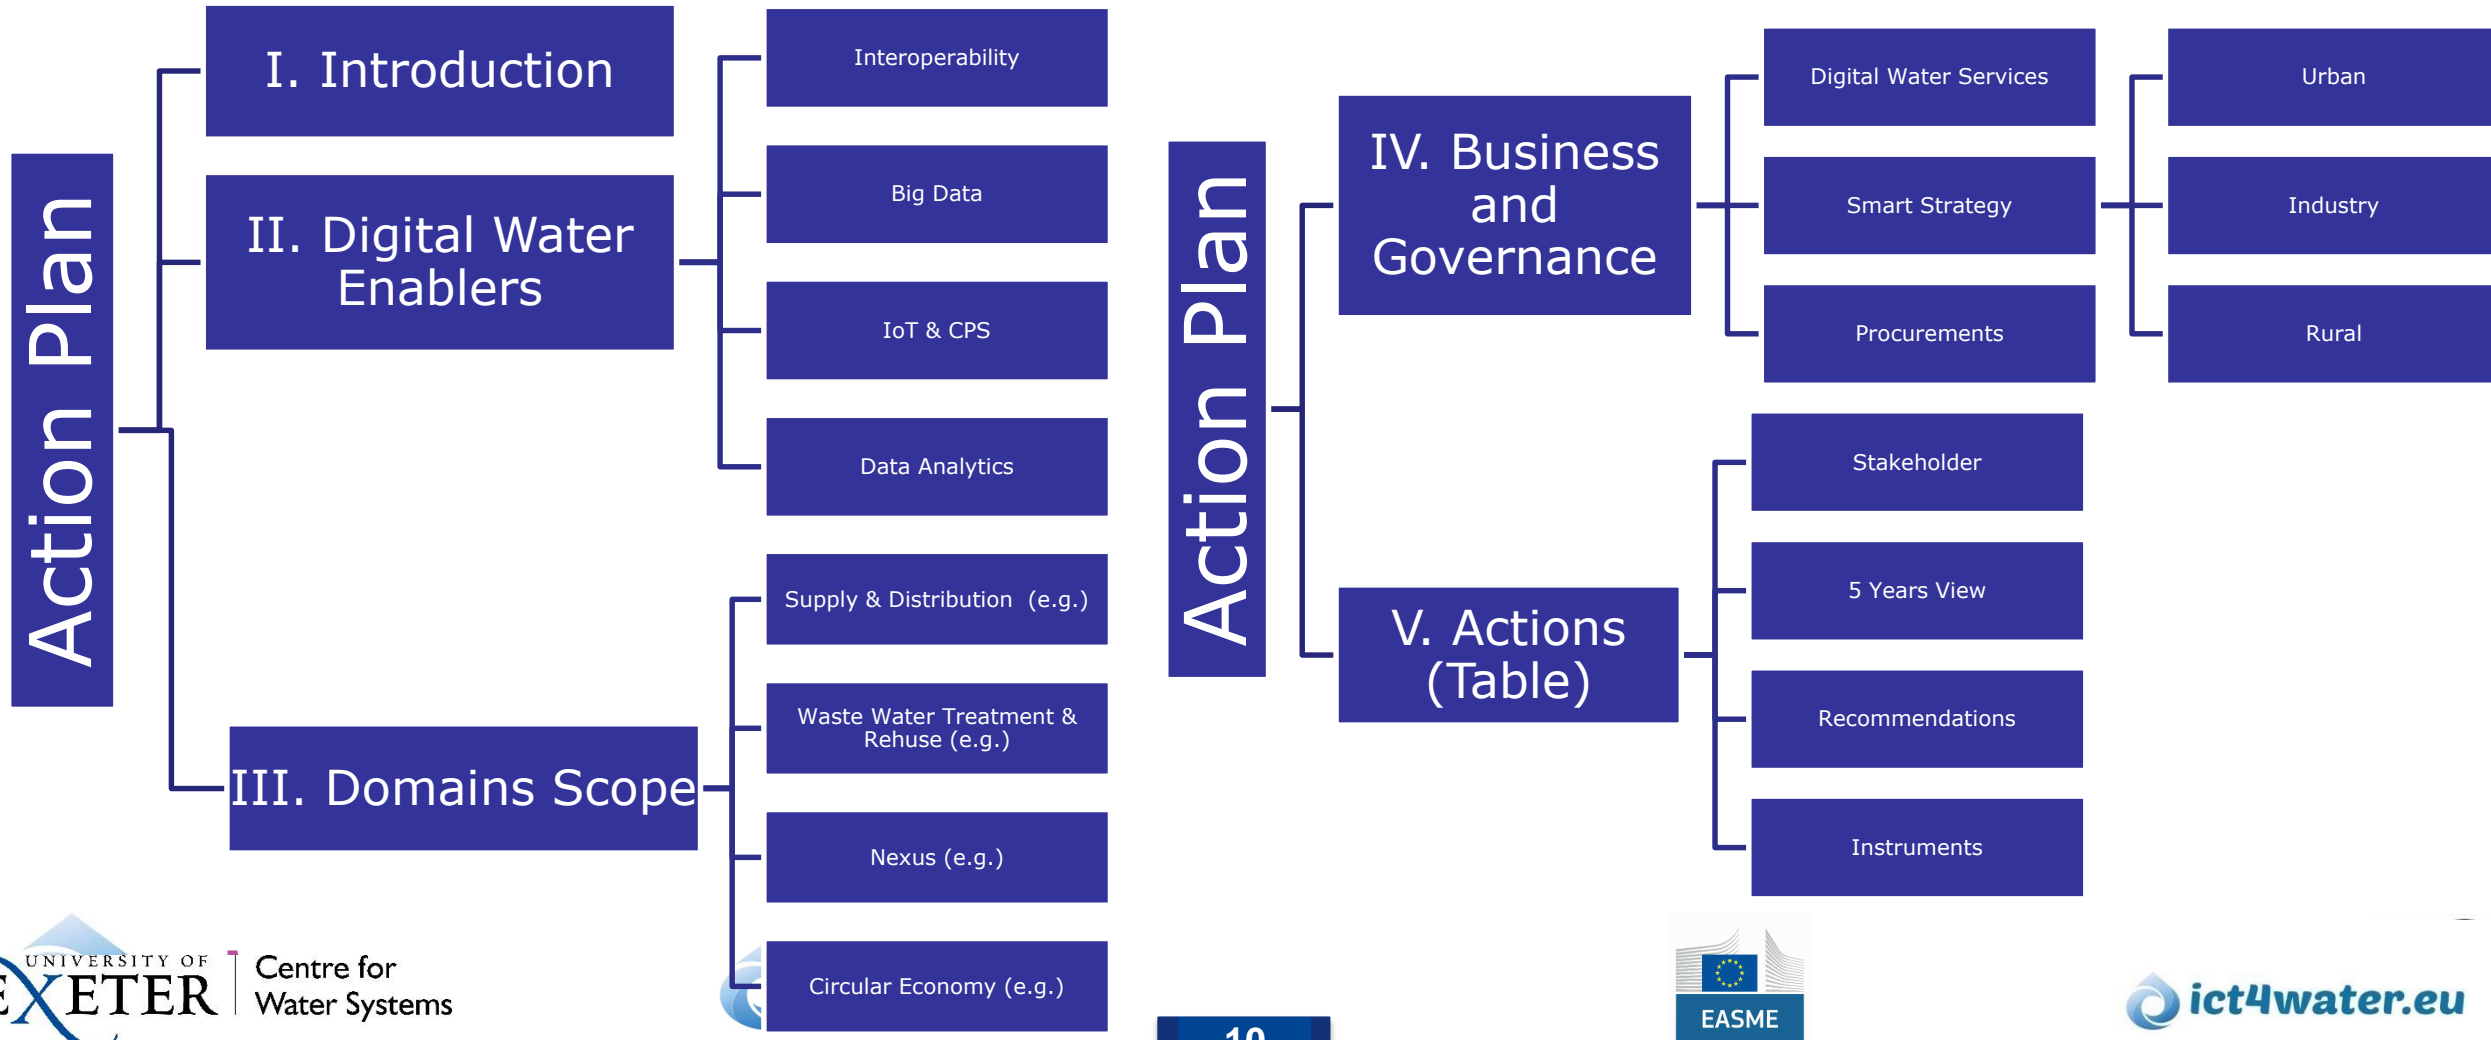

-  Water management
-  Waste Water Systems
-  Water Recovery
-  Circular Economy
-  Nexus
-  Smart City
-  Smart Agriculture
-  ...

Objectives

Structure

Introduction

The value of Data

Both private and public entities can better understand the value of water if they maximize the potential of internal and external data to deliver insights to drive their decisions.

These insights then need to activate the ecosystem of stakeholders committed to addressing water quantity and quality issues to drive economic and business growth and social well-being. Simply put, better data for smart water strategies coupled with collective/aligned action to manage water risks and drive economic and business growth.

The Value of Water

- A flood of data...
- It is not just about the data – it is about the quality of decisions
- Better profit of opportunities that data-driven insights can bring to the water industry
- The water sector is only starting to discover the potential that data-driven insights can offer.
- Data-driven business intelligence has the potential to radically transform the way water and water infrastructure is understood, managed and used.

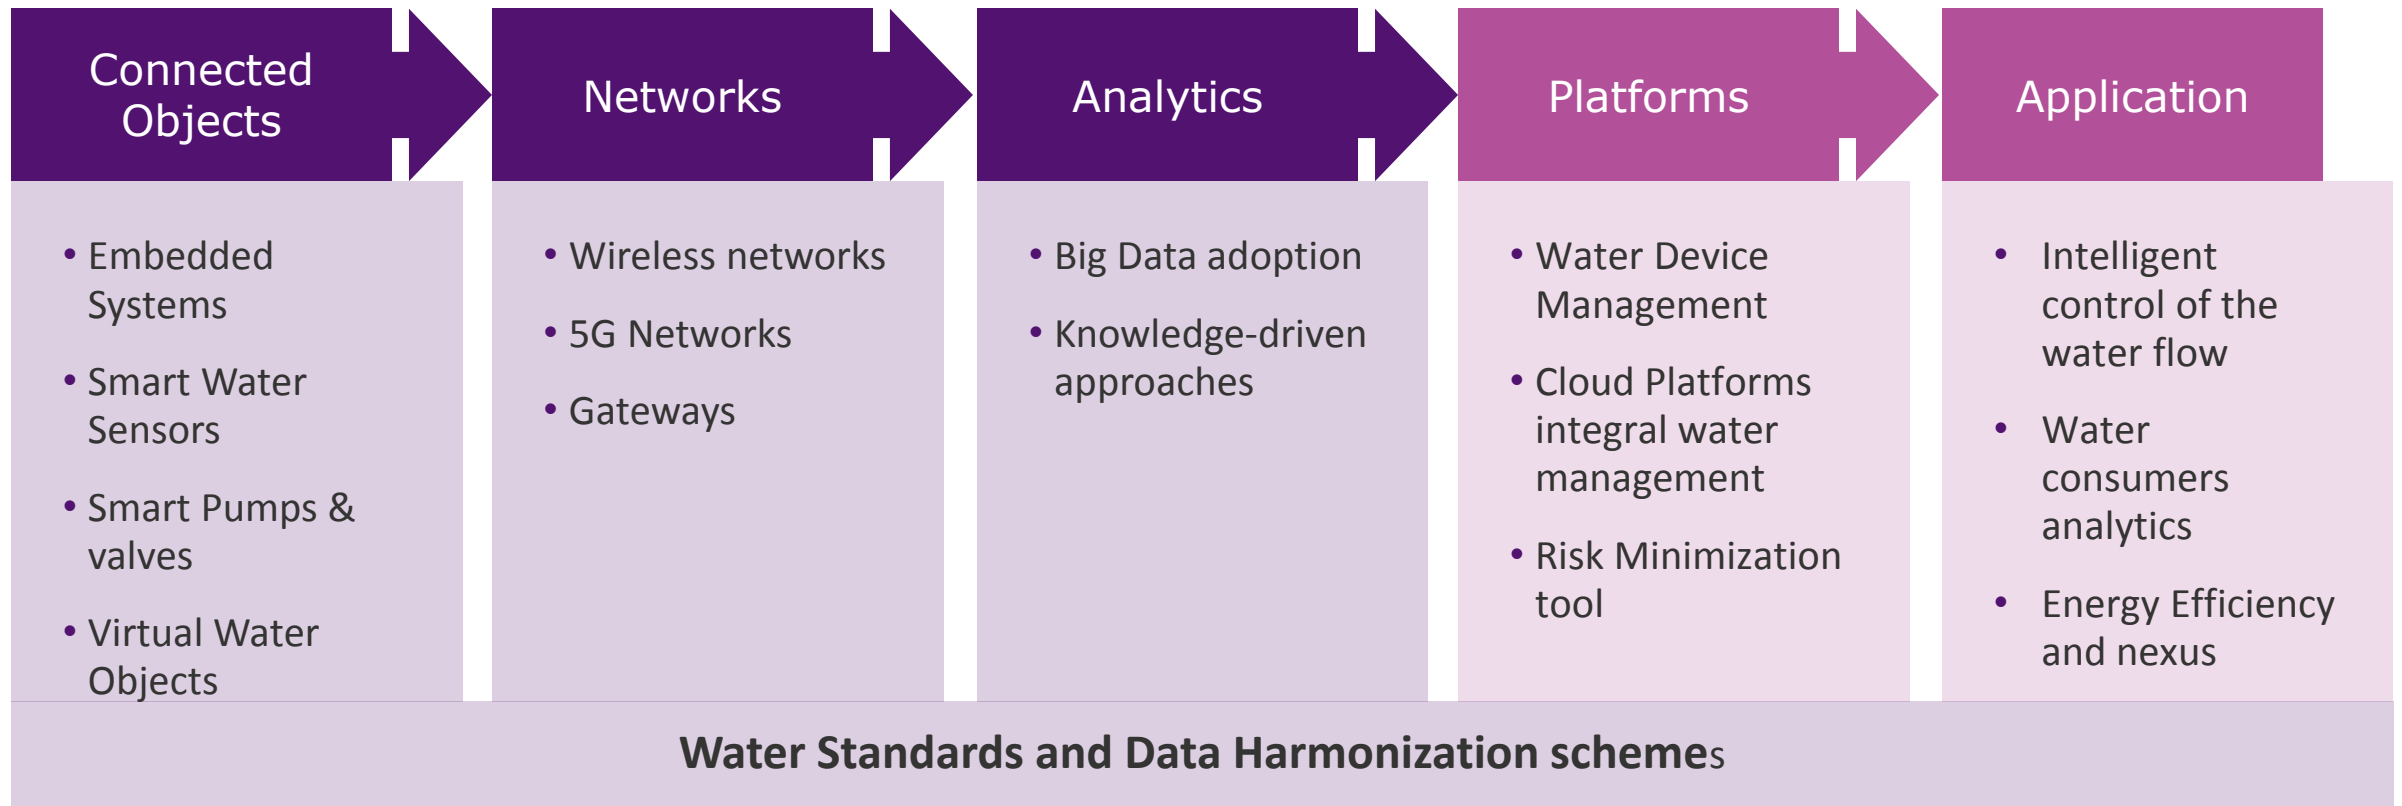

Needs

- Guarantee water
- Intelligent control of water flow
- Risk-minimization for assets in the water infrastructure.
- Energy efficiency
- Legacy adaptation & Infrastructures obsolescence
- Improve work force, asset and operational management
- Low-cost water monitoring solutions
- Timely inform consumers for their water consumption
- Sustainable behavioral changes (all actors)
- Synergies across sectors
- Real-time
- ...

- Highly detailed water consumption data.
- Efficient and scalable data services
- Evolve Water Demand Management
- Improve pricing strategies
- Data sharing, Interoperability and Standardization
- Data privacy and security (CIP)
- Digital change management
- Low cost and reliable sensors/transducers
- Reduce water-wastewater sensors maintenance
- Include real time monitoring in policies
- Advance in self and remote sensors capabilities
- ...

Challenges

The ICT challenge for the Water Sector

ICT4Water - Legislation

-  Promote the links with the existing and future water legislation;
-  Promote recommendations for ensuring interoperability and data sharing across services;
-  Harmonising energy and water monitoring practices through the smart metering;
-  Push for Water Standards which could help the development of the European Digital Single Market for water services.

European Commission > Futurium

ICT4Water

Digital Single Market

PROJECTS NEWS AND RESULTS | 20/09/2016

**Emerging Topics and Technology Roadmap
for ICT for Water Management - August 2016**

ICT4WATER use-case(s) for INSPIRE data models to develop 'building blocks' for re-use in other applications and improve current legislation;

Create awareness of the importance of Water Systems interoperability;

Reduction of Stakeholders Fragmentation, Water is a fragmented domain where decision-making legislative responsibilities in some cases are overlapped or unclear;

Smart water metering to encourage water conservation (e.g. dynamic water-pricing plans);

Promote standardization and interoperability through the deployment and application of standards, e.g. SAREF
